

Dragged down the road attached to the fill hose?
Too close to the muffler on a new pump? A bale
fork puncture while parking the loader tractor?
That nasty root-pile fire flared up again in the
wind? Forgot to set the brake on that old water
truck?

We know it happens. We want to help you get a
replacement tank!

Authentic OEM replacement tanks are available to replace damaged Handler tanks. These new tanks come with a 3-year warranty regardless of how old your damaged Handler is. Replacement tanks come with all required safety decals found on new Handlers. To help minimize the cost of your repair and because most can be transferred from your old unit, Handler replacement tanks are sold without fittings, a lid, or The Handler Knife. Should you need to replace some of these items as well, your Handler dealer can often supply them or they add them to your Replacement Tank Request.

Tanks come predrilled for fittings that match current production models. Some older Handler tanks (in particular those manufactured prior to 2015) may use tank wall fittings that do not fit current hole sizes and will need to be replaced.

Select one tank size:

- Handler I replacement tank (15 US gal)
- Handler II replacement tank (42 US gal)
- Handler III replacement tank (70 US gal)

Select any optional items required:

- Lid & ring
- Handler Knife (lid must also be selected)
- Complete set of tank wall fittings
- Rotacraft tank rinse nozzle

Please provide the following to complete the Replacement Tank Request:

- Handler serial number
- 1 or 2 pictures that clearly show the damage to the tank

**Send your completed request and pictures
to your local Handler dealer or email the
information to info@thehandler.com to locate a
Handler dealer near you.**
